

TasNetworks, Australia

Power of Choice - Market Systems Upgrade

Duration: 1,5 year; Budget: € 0,87 M

Project description

The power of choice program is a national reform driven by the Australian Energy Market Commission (AEMC). This program represents substantial change to how the energy industry works in Australia – and has fundamentally changed the way TasNetworks interacts with market participants. This program impacted the roles responsibilities and compliance obligations. Changes were required to IT systems, people and process under a tight timeframe that had to be applied nationally by the 1st December 2017. TasNetworks successfully implemented the Market Systems Upgrade project in December 2017, and TasNetworks market systems processes and metering services were ruled compliant within the mandated timeframes.
